SEAS

Silicone Edge Automated Stitching

AWARD WINNING SYSTEM
2018 SGIA Product of the Year

SEAS is a revolutionary system for SEG Keder sewing. Our sewing solutions, with three different levels of automation, were developed to increase the productivity of operation and meet clients' different expectations.

Following the market closely and realizing the exponential growth of the use of Tension Fabrics with SEG Keder, we've developed three

revolutionary solutions to increase productivity and quality in this area:

The SEAS system (Silicone Edge Automated Stitching).

The SEAS solutions are the result of a strong investment in Research & Development, backed by real-world feedback from our customers.

A SEAS kit to install on your sewing system

Get more from a standard machine

SEAS Universal Kit is a set of accessories that transform a regular sewing machine into a high-quality and productive machine to sew any type of flat keder.

Composed by 3 parts:

A. Reel Holder

B. Feeder

C. Guide

Reel Holder: allows easy placement of the reel and a controlled unwind.

Feeder: an automatic system that feeds the sewing head with the amount of flat keder needed to perform the job in an even way.

Guide: assures the perfect alignment between the flat keder and the fabric banner, making it easier to sew at a high-speed rate.

SEAS Universal Kit can be installed quickly and easily by any company employee. With intuitive use, without the need for training and simple maintenance, this is the right solution for anyone who wants to be present in one of the areas of the highest growth in the Soft Signage industry.

Book your demo now!

Learn more about our machines in person or online.
Our team is at your disposal to show our SEG finishing technologies in real time.

Why book a demo?

- We can run the demo with the textiles you want.
- Schedule the demo when works best for you.
- There's no commitment!
