

Event SEAS

Automatic SEG Keder sewing machines that don't need a sewing specialist

PATENT
GRANTED

Event SEAS 4C+

Event SEAS 6C

- **Available Event SEAS models:**

- **Event SEAS 4C:** Conveyor belt 1,2x4m, without top features.
- **Event SEAS 4C+:** Conveyor belt 1,2x4m, with top features.
- **Event SEAS 6C:** Conveyor belt 1,6x5,7m, with top features.

- **Top features**

Included only on Event SEAS 4C+ and Event SEAS 6C models.

Flat keder insertion detection sensor	Remote control
Flat keder meter counting	Multi-Reel Drawer
Thread break detection sensor	Extension Table integration
Thread meter counting sensor	Industry 4.0 Ready

- The Patented Clamp&Go system allows anyone to achieve professional results in sewing without being a specialist – Universal User.
- Professional solution for different functions:
 - Sew flat keder of various size types.
 - Sew matchable printed panels with picture-perfect precision.
 - Sew technical textiles with perfect accuracy.
 - Sew special fabrics like pillowcase fabric graphics for aluminium tube structures.

SEG Fabric and Frames

Crowd Surfers

TV & Theatre Sets

Pillowcase for aluminium
tube structures
Except round corners

- Continuous mode for large production volumes.
 - Production cycles with simultaneous loading and sewing.
 - Continuous sewing of panels of the same or different formats.
 - Control of the machine by movement of the leg, freeing the hands for placement of the panels.
- Overlock instead of the traditional lockstitch. It has significant advantages:
 - 1st – Reinforced and safer stitching.
 - 2nd – Prevents the fabric from fraying.
 - 3rd – Higher sewing speed.
 - 4th – Uninterrupted sewing for 10000m of line, compared to 100m of line for other types of sewing.
- Automatic suction of the threads and residues resulting from the sewing process.
- Parameterization of the flat keder seam distance in the corners.
 - Allows constant accuracy and ensures perfect corners when applied to the frame.
- Full use of the flat keder without any waste.
- The optional 4.0 functionality makes it easier to collect production data and increase efficiency.
- Equipped with advanced sensors, the Event SEAS is capable of automatically detecting when there is a shortage of flat keder or thread during the sewing process. If the detectors sense a material supply failure, the machine automatically stops to prevent non-conformities. When the machine stops, the operator can feed again the material for sewing in perfect conditions, ensuring no panel is wasted.
- Allows integration with one or two Extension Tables, increasing the length of the conveyor. Extension Tables available sizes:
 - Extension Table with 2 meters
 - Extension Table with 3 meters
